

Ibon Martínez-Arranz

Mathematician and Data Scientist

PROFESSIONAL EXPERIENCE

Currently

Ibon Martínez-Arranz got his BSc. in Mathematics from the University of the Basque Country (EHU/UPV) and performed a MSc. in Current Applied Statistics Techniques and a MSc. in Mathematical Modeling Research, Statistical Analysis and Computing Sciences. In 2004, he joined the Basque Country Health Service (The Department of Health of the Basque Country Government and Osakidetza) as a data analyst and his work was mainly focused on the epidemiological report of renal patients. When he joined OWL Metabolomics in 2010, Ibon first worked as a researcher in the Metabolomics Department and in 2017, he became the head of the Data Science Department, being responsible for prediction and statistical computation management since then. This highly experienced team supports metabolomics services, laboratory processes, data handling, R&D projects and technology transfer processes. Currently, I am doing a doctoral thesis entitled "Genetic Algorithms Applied to Translational Strategy in NASH. Learning from Mouse Models" under the supervision of José María Mato (General Director of CIC bioGUNE) and Dae-Jin (Data Science line leader of Basque Center for Applied Mathematics, BCAM) in which I apply genetic algorithms for the selection of NAFLD subtypes. This procedure could be applied to any disease that is based on metabolic changes. This work also has implications in the field of precision medicine.

Employment

- 2017 **OWL (One Way Liver, S.L.) Data Science Manager.**
Data Processing and Analysis, Statistical Studies and Operational Research. Statistical data processing and analysis. Collaboration in the preparation of technical reports. Elaboration of the statistical methodology used and justification.
- 2010-2017 **OWL (One Way Liver, S.L.) Data Processing and Analysis.**
Data Processing and Analysis, Statistical Studies and Operational Research. Statistical data processing and analysis. Collaboration in the preparation of technical reports. Elaboration of the statistical methodology used and justification.
- 2004-2010 **COHS Consultores en Ciencias Humanas, S.L. Data Processing and Analysis.**
Data Processing and Analysis, Statistical Studies and Operational Research. Statistical data processing and analysis. Collaboration in the preparation of technical reports. Elaboration of the statistical methodology used and justification.

EDUCATION

- Currently **PhD student**
- 2015-2016 **MSc degree in Mathematical Modelling, Statistical Analysis and Computation.** University of the Basque Country
- 2012-2013 **Expert degree in Multivariate Statistical Techniques,** Universidad Nacional de Educación a Distancia, UNED.
- 2011-2012 **MSc degree in Current Applied Statistics Techniques,** Universidad Nacional de Educación a Distancia, UNED.
- 2007-2008 **Expert degree in Advanced Methods of Applied Statistics,** Universidad Nacional de Educación a Distancia, UNED.
- 2006-2007 **Expert degree in Statistics Applied to Health Sciences,** Universidad Nacional de Educación a Distancia, UNED.
- 2003 **BSc degree in Mathematics.** Faculty of Science and Technology, University of the Basque Country.

DEVELOPMENT****OwlStatApp**

Metabolomics research has evolved considerably, particularly during the last decade. Over the course of this evolution, the interest in this omic discipline is now more evident than ever. However, the future of metabolomics will depend on its capability to find biomarkers. For that reason, data mining constitutes a challenging task in metabolomics workflow, being a time-consuming issue which usually requires detailed knowledge of bioinformatics, statistics and specialized software. We have developed OWL Stat App, an easy-to-use web application for metabolomics data analysis. It combines powerful univariate and multivariate data analysis with pathway mapping tools and visualization capacities to facilitate interpretation of the results.

Metabolomics research has evolved considerably, particularly during the last decade. Over the course of this evolution, the interest in this omic discipline is now more evident than ever. However, the future of metabolomics will depend on its capability to find biomarkers. For that reason, data mining constitutes a challenging task in metabolomics workflow. This work has been designed in support of the research article entitled Enhancing metabolomics research through data mining, which proposed a methodological data handling guideline. An aging research in healthy population was used as a guiding thread to illustrate this process. Here we provide a further interpretation of the obtained statistical results. We also focused on the importance of graphical visualization tools as a clue to understand the most common univariate and multivariate data analyses applied in metabolomics.

PATENTS GRANTED AND PENDING**W02021028562**

Lipid signatures for determining the outcome of embryo implantation during in vitro fertilization, The present invention relates to new methods for predicting the outcome of in vitro fertilization (IVF) procedures, as well as selecting the subjects to undergo IVF treatments. It also relates to methods for selecting IVF treatments and decision-making in said treatments as well as wash solutions for use in the treatment of infertility.
ID Patent: PCT/EP2020/072846

W02018007511

Diagnostic methods based on lipid profiles The present invention relates to methods for the diagnosis of NAFLD in a subject, and for the differential diagnosis of NASH or steatosis in a subject suffering from NAFLD, based on the determination in a sample of metabolic markers, particularly lipid metabolic markers.
ID Patent: EP16382320.6

W02018007422

Identification of human Non-Alcoholic Fatty Liver Disease (NAFLD) subtypes The present invention is directed to a profiling method for subtypes in non- alcoholic fatty liver disease (NAFLD) patients and to diagnostic methods within those subtypes to discriminate non-alcoholic steatohepatitis (NASH) versus steatosis patients.
ID Patent: EP16382319.8 |

W02017055397

Metabolomic signature of diagnosis and disease progression in Non-Alcoholic Fatty Liver Disease (NAFLD) The present invention is directed to a diagnostic method for non-alcoholic fatty liver disease (NAFLD) and to a method for monitoring the progression of the disease based on the determination of the levels of different metabolites. The invention also provides a method for determining the efficacy of an NAFLD therapy and a method for identification of compounds suitable for the treatment of NAFLD.

PROJECTS

blog

I write a Data Science blog at imarranz.com where I apply Mathematics, Python and R to open datasets and write-up the results and write about my experience in Data Science.
